

Subject Index

(Numbers in *italics* indicate illustrations)

Accessory olfactory bulb (AOB), 134
(*table*), 141, 142

Acetylcholine, 63

Acetylcholinesterase (*See also* AChE),
62

AChE, 62, 63, 67

and dentate gyrus, 64

Adaptive reflexes, 81

Adenosine, 63, 67, 68, 69

PIA as agonist of, 69

AEP, 107

AESOP theory, 84

Alzheimer's disease, 9, 61, 62

and cortical dementia, 205

and entorhinal neurons, loss of, 62

and perforant path activity, 71

Anterior cingulate cortex, 175, 176

Anterior thalamus, 175, 176

Anticipatory set, 208

and the CC_r, 208, 209

Ascending Reticular Activating System
(ARAS), 78

Attention, 203

Attitudes, 87

and chimpanzee, 88, 90

Averaged evoked potential (AEP),
107

Basal ganglia, 178

and behavior, 183

and sequencing —, 203

and the CC_r, 205, 209

and cognitive activities

and attention, 203

and cognitive sets, 203

and the GLS, 203

and higher intellectual activities, 198,
199

Behavior

rotation as, 184, 187, 189, 190

with 6-OHDA lesions, 190

with reserpine, 190

with quinpirole, 190

stereotypy as, 183, 185, 187, 188, 190

and sensitivity, 188, 189, 191 (*table*)

with quinpirole, 188, 189

and supersensitivity, 184, 190, 191,
192

and breakdown in D1/D2 syner-
gism, 192

"Behavioral atom" of Skinner, 42

Behavioral supersensitivity, 184, 186

Belluzzi, James, 8, 41 (*article*)

Berntson, Gary, 9, 10, 75 (*article*)

Boysen, Sarah, 10, 75 (*article*)

Brain (*See also* specific entry)

and g factor, 124, 125

lesioning of (*See* Lesioning, of brain)

size of, 108

Brainstem, 198, 215

Bureš, J., 6

CA1 cell, 43, 44, 70–72

and bursting, 43–46, 47, 49, 57

with CP-55,940, 53

with dopamine, 46, 47, 48, 49

with glutamate, 49, 50

with SKF 82958, 55, 56, 57

suppression of, by dopamine, 46,
48

and cannabinoids, 52–54

operant conditioning in, 46, 47, 49,
50

reinforcing agents with, 54 (*table*)

Cacioppo, John, 10, 75 (*article*)

Cannabinoid receptor, 52–54

agonist for, 53

Carbachol, 67

Caudatoputamen, 160, 167, 201

dorsal —, 175

CC (centrencephalic core) (*See also*
CC_r), 199

and the general learning system, 200,
201

and problem solving, 200

of rat, 204

- CC_r (centrencephalic core of rat), 204, 205
 and the anticipatory set, 208
 and basal ganglia, 205, 209
 and engrams, 209, 210
 and frontal lobe, 211
 and mental retardation, 210, 211
 and executive functioning, 210
 and subcortical dementia, 205-207
 and visual discrimination learning, 207, 208
- Centrality
 and *g* factor, 172
 in neural mechanisms, 176
- Centrencephalic core (See CC; CC_r)
- Centrencephalic system, 78, 79, 94
 Penfield's theory of, 198-200
 and "split-brain" preparation, 212
- Cerebellar cortex, 32
- Cerebellum
 and classical conditioning, 27 *et seq.*, 214
 climbing fibers in, 31
 interpositus nucleus of, 34, 35
 and learned skills, 27, 28
 and long-term depression, 34
 mossy fibers in, 30
 parallel fibers in, 28
 Purkinje cells in, 28
 stimulation of, 28
- Cerebral cortex, 197, 214, 215
- Chimpanzee, 87-93
 attitudes in, 88, 90
 evaluative dispositions in, 90-92
 and paired-choice selection task, 93
 photographic recognition in, 88, 89
 vocalization in, 89
- Classical conditioning, 27
 and attitude, 87
 and aversive events, 33
 and cerebellum, 27 *et seq.*, 213, 214
 and interpositus nucleus, 34, 35
 memory traces for, 35
- Climbing fibers, 31
- Cognitive sets, 203
- Concentric (parallel) dimension (of neurobehavioral organization), 77, 94
 and evaluative bivalence, 83
- Conditioned stimulus, pathway for, 30
- Consolidation, in memory, 2
- Cortical dementia, 198, 205, 215
 symptoms of, 206
- Cotman, Carl, 9, 61 (*article*)
- CP-55,940, 53, 54
- Crinella, Francis, 11, 13, 159 (*article*)
- D**₁ receptor (See Dopamine [DA] receptor)
- D₂ receptor (See Dopamine [DA] receptor)
- DA receptor (See Dopamine [DA] receptor)
- Defensive reflexes, 80
- Dentate gyrus, 62, 63, 71
 and adenosine, 68, 70
 and entorhinal lesions, 62-64, 65
- Detour apparatus, 165, 166, 201
- Diagonal band of Broca, 139, 141
- Dopamine, 42, 43, 190, 192
 burst suppressant effect of, 46, 48
 and CA1 cell, 46, 47, 49
 and operant conditioning, 46, 47, 48, 49
 neurons containing, 184, 192
 and depolarization inactivation, 193
- Dopamine (DA) receptor, 183
 agonist stimulation of, 188
 and behavioral supersensitivity, 184
- D₁ receptor as, 183, 184, 187, 192
- D₂ receptor as, 183, 184, 187
 and antipsychotic drugs, 192
 density of, 187, 190, 191
 and up-regulation, 184, 185, 190, 192
 and D₁/D₂ synergism, 183-185, 190, 192, 193
 and receptor density, 185
 and reserpine, 185
 and supersensitivity, 192
 and vesicles, 190, 192
 plasticity of, 183
- Dorsal hippocampus, 175, 176
- DRL, 140
- DRO, 140, 141
 and passive-avoidance task, 140
- Dual task paradigm, 123
- Dynorphin, 43, 50-52

- E**
ECS, 2
ECT, 109 *et seq.*
 and information processes, 109
Electroconvulsive shock, 2
Elementary cognitive task (*See also* ECT), 109 *et seq.*
Ellis, Norman, 2
Entorhinal cortex, 62, 63
 and adenosine binding, 69
 lesions of, 62-64, 65
Epilepsy, 71, 72
Eticlopride, 186, 187, 189
Evaluative bivalence, 76 *et seq.*
 and attitudes, 87, 88
 and behavior, 80
 and chimpanzee model, 87-93
 and conditioned response, 82
 and emotion, 81
 multiplicity of processes in, 84, 85
 interactions among, 85-87
 and photographic recognition, 89
Extinction
 operant schedule with, 140
 variable-interval (VI) schedule with, 140, 141
Eyelid response, 27
- F**
Factor analysis, 104, 169
 and principal factor, 105
Field potential, 66, 67, 69, 70
 and adenosine, 68
- G**
factor, 10, 11, 13, 14, 103 *et seq.*
 and biochemical factors, 125
 biological basis of (*See also* Intelligence), 178
 graphical representation of, 162
 and Nsp, 160, 164-178
 and centrality, 172
 correlates (nonpsychometric) of, 177
 brain size as, 108
 height as, 108
 heritability as, 107
 and inbreeding depression, 107
 MT as, 112
 myopia as, 108
 physical, 107-109
 pitch discrimination as, 125
 and factor analysis, 104
 and general mental ability, 104
 and learning ability, 106
 and lesions of the brain
 to olfactory bulbs, 173
 to superior colliculus, 173
 and multiple processes hypothesis, 116, 126
 test for, 116-118
 and nerve conduction velocity (NCV), 120, 121, 122, 125
 peripheral, 121, 122
 and Nsp, 169, 173-178
 physiological basis of, 120
 predictive validity of, 106
 psychometric, 104-107, 173-176
 and lesions of the brain, 174 (*table*)
 and reaction time (RT), 110-112, 118-120
 and RT-g correlation ceiling, 118, 119
 and task complexity, 112
 and SDRT, 111, 117-119
 stability of, 105
 and unitary process hypothesis, 116, 126
 test for, 116-118
 and wholeness, 171
G loading, 104-107, 169, 172, 174, 176
General learning system (*See also* GLS), 160, 198, 200
 and lesioning, 201
Gi Proteins, 53
Globus pallidus, 160, 167, 174, 201
GLS (general learning system), 203
 and basal ganglia, 203
 and lesioning, 201
 and subcortical dementia, 202
Glutamate, 49
 and CA1 bursting, 49, 50
 and perforant-path synaptic activity, 63
Group factors, 106
Gustatory stimuli, 80-82
- H**
Hallervorden-Spatz syndrome, 206
Haloperidol, 184, 185, 186, 187, 188, 191 (*table*)
Hayes, Keith, 5
Height, and g, 108

- Heritability, of *g*, 107
- Hierarchical dimension (of neuro-behavioral organization), 77, 85, 94
- Hippocampus, 43, 62, 63
and adenosine, 63, 69
CA1 cells of, 43-45
bursting with, 43-47, 48, 49, 53, 55, 56, 57
and CP-55,940, 52
and dopamine, 46, 47
and glutamate, 49, 50
and SKF 82958, 55, 56
CA3 cells of, 43, 57, 72
opiate reinforcement of, 50-52
and dopamine, 43
dorsal, 175, 176
perforant pathway of, 62, 63, 69
and Alzheimer's disease, 71
and reinforcement, *in vitro*, 58
slice preparation of, 66-70
- Huntington's disease, 205
- 6-Hydroxydopamine (*See* 6-OHDA)
- Hyperdipsia, 139, 140, 144
- Hyperirritability
olfactory bulb lesions in, 131-135
septal lesions in, 139
- Hypoalgesia, 86, 87
- Hypoemotionality, 139
- I**nbreeding depression, and *g*, 107
- Inclined-plane apparatus, 166, 168
